Replace the filters yourself in about 10 minutes

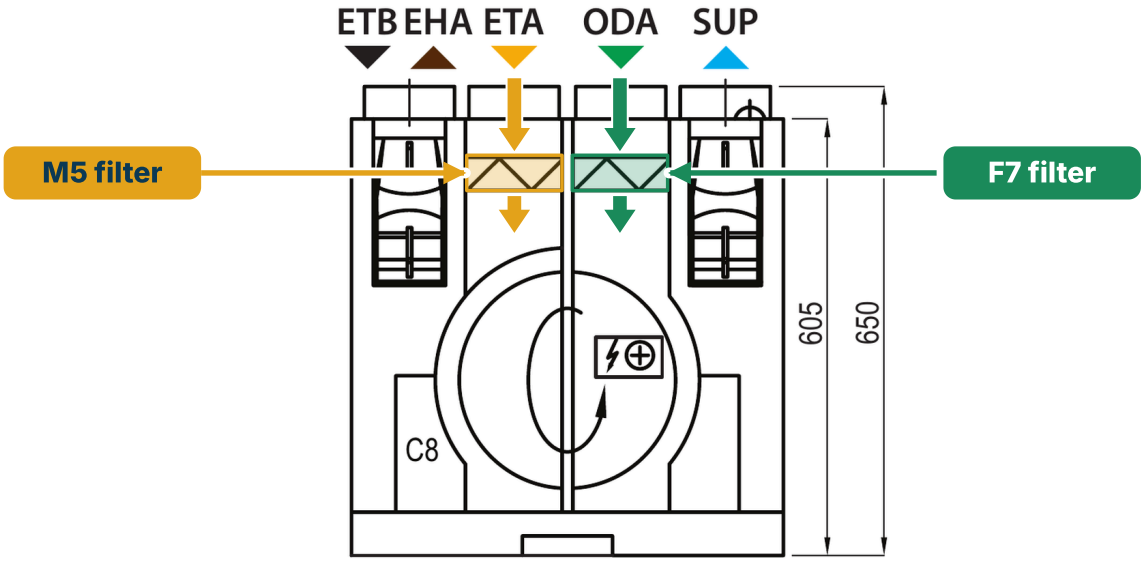

Komfovent Domekt R 200 V C8 • right-hand version (R1)

1 × F7 filter
blows fresh air into the room

1 × M5 filter
draws room air out

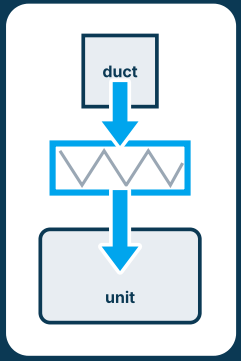

285×125×46 mm
size of both filters

1 Where are the filters?

Unit seen from the front, door open. The coloured arrows show the airflow: from the duct at the top, down through the filter into the unit.

2 Most important: the arrow on the filter

In this unit the air moves from the top down. So the arrow on the filter must point DOWN ↓

Each filter has an arrow on its frame. The arrow shows which way the air goes through the filter. A filter fitted the wrong way round does not clean the air properly.

3 Right way and wrong way

Right
Arrow points down, into the unit

Wrong
Arrow points up, filter upside down

4 Replacing the filters step by step

1 Switch the unit off

Switch the unit off at the control panel and disconnect it from the mains. Wait until the fans have stopped.

2 Open the front door

The filters are behind the door.

3 Take out the old filters

The filters are side by side at the top centre: M5 on the left, F7 on the right. Pull both out towards you.

4 Find the arrow on the new filter

There is an arrow on the filter frame. Turn the filter so that the arrow points DOWN.

5 Slide the new filters in

M5 on the left, F7 on the right. Push them all the way in, arrows still pointing down.

6 Close the door and switch on

If the panel shows a filter warning, reset it. Done!

How often to replace?
Usually every 6 months, or when the control panel shows a filter warning.

Left-hand unit (L1)?
Then the filters are mirrored. The arrow still points down.

Anything unclear?
Contact us and we will help you find the right filter: filt.ee

Old filter
Put it in a plastic bag and dispose of it with household waste.
